1. The following is an examiner's statement of reasons for allowance: the closest prior art Engle et al (USPN 5,760,126) teach a coating composition comprising a water-soluble or water-dispersible polymer (*reads upon permeable to aqueous medium*) and a sol comprising a colloidal dispersion of surface-modified, inorganic microparticles in liquid, wherein the inorganic microparticles have an average particle size in the range of from about 2nm to about 200nm, and include various metal oxides such as silica, alumina, titania, and zirconia as instantly claimed; wherein the microparticles are surface treated with silane coupling agents to produce microparticles with surface-attached or surface-bonded organic moieties and Engle et al specifically teach the use of N-(trimethoxysilylpropyl) ethylenediamine triacetic acid. Engle et al do not teach or render obvious that the surface treatment produces metal-ion sequestrants attached to the nanoparticles and that the polymer composition comprising the derivatized nanoparticles is utilized in an article with a barrier layer that does not contain the derivatized nanoparticles. It is further noted that WO/089113A, USPN 4701500, WO 98/51435 and WO 03/038842 all fail to teach the claimed laminate structure with a metal-ion sequestrant as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monique R. Jackson whose telephone number is 571-272-1508. The examiner can normally be reached on Mondays-Thursdays, 8:00AM-4:30PM.
